Size & Style

Each domestic equity manager's portfolio is loaded into NEPC's system (stock by stock) and the portfolio is compared to all other portfolios in the universe. The portfolio receives a "score" based on the overall size and style of its holdings.

>Why?...

- --Size and style are two of the most important decisions a manager makes.
- --Acts as a check on manager consistency over time.
- --Offers an opportunity to compare relative performance with peers.
- -- Assists in diversifying the overall fund equity exposure.

> Calculations...

- --Size is measured by how far above or below the universe median a manager's portfolio falls.
- --Style gives consideration to: book to price, earnings growth, earnings to price and yield. Each of these factors is captured from the latest reported data.

>Results...

--The size and style scores allow each manager (or fund Composite, when summarizing) to be placed into one of nine peer groups (three by size times three by style).

>Comment...

--No methodology captures all of the complex decisions a manager makes but this exercise offers one more analytical tool.

Customized Indices: Policy and Allocation

- For each Total Fund actual return we report to you, if we have available information, we also construct two hypothetical returns: A Policy Index return and an Allocation Index return.
- These two hypothetical returns are useful in diagnosing to what factors the total return can be attributed.
- The Policy Index is merely the return the Fund would have had if the policy target allocation had been strictly adhered to and each asset class investment would have been in an index fund for that class, rather than with an active manager.
- The Allocation Index is the return the Fund would have had using the <u>actual</u> allocation of the Fund and index returns, as above with the Policy Index.
- NOTE: These tools are most useful over longer time periods and are not particularly useful over the short run.
- Looking at the Policy Index for longer term returns gives us a base-line. What part of the Fund's return can be attributed to being in the right asset classes? For example, the Teachers Fund Policy Index "return" of 9.0% for the last five years accounted for the majority of the actual return of 10.5% for that time period. This is not surprising and is as it should be. Policy decisions (what asset classes to be in and to what extent) are the most important decisions a Fund's Board makes.
- Turning to the Allocation Index. What information does this add? Remember, that the only difference between it and the Policy Index is that we let the allocation "drift" away from the target to the same extent as actually occurred. Then, the difference in return (in this example 9.1%-9.0%) can be attributed to this allowed drift. In this time period, letting asset classes drift beyond their targets had a positive effect on the performance of the Fund.
- Lastly, we compare actual return to the hypothetical Allocation Index return to see what contribution was made by active management. Here we see that substantial value was added during this time period (10.5%-9.1%).

- New England Pension Consultants, Inc. (NEPC) uses, as its data source, the
 plan's custodian bank or fund service company, and NEPC relies on those
 sources for security pricing, calculation of accruals, and all transactions,
 including income payments, splits, and distributions. While NEPC has
 exercised reasonable professional care in preparing this report, we cannot
 guarantee the accuracy of all source information contained within.
- The Investment Performance Analysis (IPA) is provided as a management aid for the client's internal use only. Portfolio performance reported in the IPA does not constitute a recommendation by NEPC.
- Information in this report on market indices and security characteristics is received from sources external to NEPC. While efforts are made to ensure that this external data is accurate, NEPC cannot accept responsibility for errors that may occur.
